

## Technical Seminars for Experts

<b>Country / Region</b>	The technical seminars are organized and carried out in Germany, mainly Bavaria, or offered online. Target countries are developing countries and emerging markets all over the world.
<b>Time Frame</b>	8 days
<b>Financing</b>	Bavarian Ministry of Economic Affairs, Regional Development and Energy; Bavarian State Chancellery
<b>Project Goal</b>	Fostering both knowledge transfer and business contacts between Bavarian and foreign Institutions and companies.
<b>Subjects Technical Seminar</b>	Renewable Energies, Energy Efficiency, Water Management, Waste Management, Technical Agriculture and Food Industries, Packaging Industry, Regional Networks, Sustainable Tourism, Construction and Energy Efficiency, Vocational Training, etc.

### Background

Every year, the Free State of Bavaria invites several delegation groups to Bavaria. The program targets entrepreneurs, business leaders and technical experts from developing countries and emerging markets. During one week, the participants can learn about new technologies and concepts that Bavarian companies and institutions have to offer. They can not only learn about new practical applications, but also make business contacts. Through the technical seminars, knowledge transfer as well as business contacts should be created in both directions. In times of travel and contact restrictions these seminars are offered online.

### German Partner bbw gGmbH

The International Division of bbw gGmbH implements development projects in the field of vocational training worldwide; employees, project partners and German experts are active in the particular countries.

At the same time, each year bbw organizes several technical seminars in / with Bavaria for foreign experts. bbw is responsible for the selection of participants, program development and the coordination within Bavaria.

The trainings and company visits are tailored to the needs of the participants. In most countries, bbw cooperates with its project partners in the particular country in order to approach suitable experts.

## Project Description

Participants are invited to inform themselves about one of many possible subjects such as renewable energy, water, waste management, packaging, construction, regional development, sustainable tourism, vocational training or others, and learn about new concepts and technologies in a specific field. At events with on-site attendance, up to 18 experts can participate in a seminar and are supported by interpreters, if necessary. At online events, up to 300 people are possible per seminar. During the one-week seminar, the participants are offered a program that is adapted to their knowledge, their needs and interests.

The company visits can also be combined with a visit to a trade fair. The professional program is completed by a cultural program, which allows the participants to get to know the Bavarian culture and touristic offers. In an online event, the companies present themselves with a video produced by bbw. Additionally, a company representative is present during the meeting to chat with the foreign experts and answer questions. Following up the sessions, the presented videos and presentations will be sent via a link to all participants who registered for the seminar.

## Subjects and Countries

bbw has already received groups from the following countries in the past:
